TECHNICAL CHARACTERISTICS/COUNTERTOP

TECHNICAL CHARACTERISTICS

The countertop SOLID SURFACE is a solid non-porous surface, renewable and with easy maintenance. A routine care is sufficient to keep their appearance like new. Its seamless surfaces without pores prevent the appearance of mold and moisture, is an anti-bacterial countertop.

PERIODIC CARE

For care you can use any conventional cleaning agent, however we recommend to use a mild detergent (brand "CIF " or similar) and fine-grained sponge (included in this kit) to keep its wonderful aspect.

MAINTENANCE RENEWAL

As the SOLID SURFACE countertop has the same structure and the same color in all mass the damage can be easily repaired .

In case of damage of the surface with small scratches or burns you should act as follows: sand the damaged area with a semi-fine sandpaper (320) with a circular motion until the scratch disappears. Finish with fine grit sandpaper (400/ 600) to match the rest of the surface.

WARRANTY

Our products have a five year warranty for manufacture defects.

The warranty is invalid if the defects are due to the inappropriate use by the customer .

DECORATIVE SHOWER SCREENS

- **The Imagik decor tiles are certified through the ASTM D870 and ASTM D2247 regulations under the conditions of normal use.
- **We guarantee a lasting design on the glass. When two glass partitions overlap, the design is repeated to avoid confusion with the images.
- **If there is a shower stall with three decor glass structures and the middle one breaks, there is no need to buy a new shower stall, the one partition can be replaced and we guarantee that the design will coincide without any complications.
- **Unlike traditional glazed decor shower screens, the Imagik decor design is found inside the glass, on the side that is in contact with the water, so an anti-limescale treatment can also be applied on to the designs so the overall maintenance is the same as it would be without the decor design.
- **It is very important, when ordering the MOIRA shower screens, to indicate if the fixed side is to go on the right or the left and when ordering the BAHAMAS shower screens, if it is to be fixed on the left or on the right. Keep in mind this is always based on looking at the shower partition from the outside-in.
- **The product has a three year guarantee.

We meet the following regulations:

ISO 9001:2008 (Quality Control)

UNE 166002:2006 (Management of I + D + i)

CE (Mark in accordance with regulations)

TECHNICAL CHARACTERISTICS

- 6 print colours that allow for realistic combinations and tones.
- Translucent ink applied by print head injection.
- Up to 600 dpi resolution.
- Imagik technology offers an unchanging nature in time based on the **UNENE141128** normative in relation to regular use and cleanliness in domestic areas.

(Below are cleaning suggestions and additional information regarding Imagik).

TECHNICAL CHARACTERISTICS/SHOWER SCREENS

TEKNOCLEAN was born from our love for innovation. It is an intelligent system based on nanotechnology. It is applied to the glass surface and it forms a protective film that repels liquids and minimizes the incrustations of dirt and lime scale deposits. This treatment offers our customers spotless, fast and long-lasting cleanliness.

A study made by EnduroShield certifies the effectiveness and reliability of the system TEKNOCLEAN system, after a great number of rigorous resistance testing our system obtained excellent results and certified that the application methods provide a correct adhesion. This allows shower screens to be cleaned in an easier and more comfortable way.

*The anti-lime scale treatment is not a self-cleaning treatment. For this reason we recommend regularly cleaning your shower screen with the products recommended by the manufacturer. The durability of the treatment can reach 8 years if the adequate maintenance requirements are followed.

CLEANING SUGGESTIONS

TEKNOCLEAN is a system which provides shower screens with a treatment that is applied to glass and forms a protective layer that repels liquids and minimizes lime scale stains and dirt helping maintain a brand new look over time.

This innovative system allows for faster and more effective cleaning with less effort.

Even with **TEKNOCLEAN**, all shower screens need some care to maintain a clean and impeccable look over a long period of time.

Humidity is the main enemy of shower screens as it can cause the formation of bacteria and mould. A few practical ways to maintain glass shower screens in good condition are:

- Ventilate the washroom
- Dry the shower stall after each use with a cloth that does not leave fluff or a rubber squeegee. The more the stalls are cleaned, the easier it is to get rid of any accumulation of filth. This way, we can avoid staining and the lime scale accumulation on the shower screens.

Specific products used for cleaning glass shower screens

- Choose cleaners that will not harm metallic surfaces, in no way whatsoever should abrasive cloths, scrubbers or harmful materials be used.
- Only use neutral products without acidic, chemical or reactive agents (like bleach, ammonia, acids etc.), as they can scratch or harm the glass, especially if the shower stall has recently received special treatments.
- Do not use any descaling products or acids that contain sodium hypochlorite, sodium hydroxide or any other products that are unsuitable for cleaning lacquered surfaces, including abrasive detergents with a chlorine base or products that contain bleach or solvents as these can damage both the stall frames and the paint. The use of these products can cause corrosion, paint to blister and/or deteriorate the serigraph.

CLEANING PROCESS

- Rub the shower stall with the cleaning product
- Let it work for a few minutes
- Scrub with a non-abrasive sponge and let it dry well until it is clean and shiny.

This process is always the same; it is recommendable to dry the surface of the shower stall after every use, especially the lower areas, to help avoid damaging the finish where the water residuals are in contact with the metal or accessories.

BRILLIANT ADVANTAGES

- Easier Cleaning
- Longer brand new look
- Minimizes lime scale deposits and polluting substances
- Non-stick surface
- Covering is resistant to usual cleaning products
- Protection against difficult stains such as oils and fatty substances

INSTALATION INSTRUCTIONS/SHOWER TRAY ISLA

PRODUCT PRESENTATION

The shower tray Isla is made of polyester resin, quartz and dolomites with a polyurethane paint cover of high quality **UNE 12720**, with the following characteristics:

- Antibacterial: **JISZ 2801:2006** that prevents any microorganism from settling on its surface.
- Antislip: class 3 over flat surface with an inclination of 6°
- Hydrolysis resistant: no alteration after 7 days immersed in water
- Resistant to domestic cleaning products: superficial hardness 5 H

The results of our “resistance to cleaning products tests” have been:

BLEACH	24 hours	without visible changes
ANTIBACTERIAL DISINFECTANT	24 hours	without visible changes
ANTI LIME CLEANER	24 hours	without visible changes
VINEGAR	24 hours	without visible changes
AMMONIA	24 hours	without visible changes
CILLIT BANG	24 hours	without visible changes
INDUSTRIAL ACETONE	1 minute	without visible changes
ISOPROPANOL	5 minutes	moderate change of colour
ETHYL ALCOHOL	5 minutes	without visible changes
HAIR COLOUR	15 minutes	without visible changes
HYDROGEN PEROXIDE	24 hours	light change of colour
POVIDONE IODINE	24 hours	without visible changes
WINE	24 hours	without visible changes

This is a high-quality, design product that requires a correct and careful installation done by a qualified professional.

1° BEFORE INSTALLING

Check the tray for any damage.

Check that the shower tray is the colour, size, shape and type the customer requires (all shower trays can be cut with a grinder with diamond disk)

2° SELECT AN OPTION OF INSTALLATION

This depends mainly of the depth and distance where the drainpipe or siphon is placed as these factors will determine the tilt of the installation and therefore an optimal drainage capacity.

- recessed to the floor
- suspended over the floor (a base should be lifted and filled)

This decision must be taken depending on the result of a drainage test. It must be tested with the valve placed in the position where it should be once installed and determine the minimum height where the water flows correctly through the installation. This minimum height will determine the final position of the shower tray.

3° PREPARATION OF THE FLOOR

As any synthetic based shower tray, the shower tray Isla is a product with some elasticity that lets it withstand temperature changes perfectly. However, it is necessary to be set on a base that is compact, level and dry (in any case there must be a maximum fall of 0.5% for drainage). If this is not done, when the grey cement mortar dries, it can pull from the shower tray and make it curve or even crack.

The base must be of mortar, at least the top side in contact with the shower tray, never of sand as the sand would eventually be pressed and not perform its function correctly.

On the base, there must only be the minimum space necessary to work with the collocation of the valve and a trench for the drain pipe.

INSTALATION INSTRUCTIONS/SHOWER TRAY ISLA

4° INSTALLATION OF DRAIN

Once the drain has been placed in its definitive position and connected to the pipe (we recommend a PVC flexible hose to make it easier), the appropriate tests must be undertaken to check that the water drains and there are no leaks in any part of the installation.

It is also important to check that any element of the installation stands out of the base level, as this would cause an irregular settlement of the shower tray that could deform it (be especially careful if the valve is over the base level).

5° LAYING OF THE SHOWER TRAY

Unpack the shower tray very carefully in order to not hit or scratch it with the tools used to open the box. The plastic protector and the cardboard will be used to protect the shower tray when laying it.

When attaching the shower tray, we recommend to apply over the mortar base (previously made and dried) longitudinal strips of any kind of polyurethane sealant such as sikaflex or similar or, when that is not possible, concrete glue.

Lay the shower tray in its final position making it coincide with the drain, with space for the valve and then lay the valve following the instructions of the manufacturer.

It is necessary to use a non-siphon valve if the installation already has the waste trap since if it is not so, the capacity of evaluation of this installation can be affected (the valve of the shower tray can become siphon or non-siphon easily, following the instructions provided with the valve).

The shower tray should fit into the walls preferably between 0.5 and 1 mm to allow tiling down onto the tray surface. That guarantees a better impermeability in the joints with the walls. It is advisable to leave a little margin of 2 mm between the tile and the shower tray, as an expansion joint that will be sealed with silicone afterwards.

Adjust the shower tray checking that it is well-attached and level in both directions, so that it can drain before tiling the rest of the wall and laying the shower screen, in any case APE will not cover the cost derived from the replacement of shower screens or tiles laid on the shower tray.

Remove the plastic protector and put silicone on the entire perimeter in contact with the wall (with mould-preventing silicone) that must be left to dry at least 24 hours before using the shower tray.

6° FINISHING THE WORK

The final process is tiling and grouting the walls, the shower tray must be protected with plastic so that it is not stained with cement or fine mortar. If this occurs, these must be cleaned quickly with a damp sponge before they dry, otherwise the cleaning can be very laborious, and can even damage the shower tray since very powerful products or metallic tools and swabs must be used, which are not recommended at all.

Take special care when cleaning the excess cement in the joint of the walls since, in many occasions, many products are used, such as acids to remove cement or etching, that drain and are deposited for a long time on the shower tray and this can damage the outer layer. The shower tray is prepared to withstand this kind of products but only for a short period of time. That's why we have to rinse it off and clean it quickly.

Never use the shower tray as a garbage dump of the remains of the work, especially cement, which can stick to the shower tray or to the drain and could generate a lot of problems.

All of these damages on the polyurethane paint that covers the shower tray that are a result of not following the abovementioned instructions are not covered by the guarantee.

7° CLEANING AND MAINTENANCE

The shower tray can be cleaned with any product suitable for cleaning, except for those contraindicated for derivatives of marble (read the instructions of the product) and then rinsing with water.

It is recommended to clean it with soap and water with a damp soft cloth or sponge, never with a scourer.

For disinfecting, you can use bleach or diluted ammonia and rinse it off afterwards.

Against cement stains, you can use salfuman (never mix it with bleach as it produces a very toxic gas) but very carefully as its gases can damage the chromium plating so it is recommended to use it before installing shower screens and taps.

Anti-lime products can be used but only leaving them to act for a short period of time and then rinsing it off with plenty of water.

APE will not cover any problem in any of the shower trays Isla of the Home Collection by APE that have been installed or maintained in any different way than indicated previously in these instructions.

The reproduction of the colours is approximate. **APE** reserves the right to alter or amend the products here stated.

Price codes and product codes should be checked, since there may be typographical errors.
